SUMMARY

I am a Full-Stack Web Developer with proficiency in Next.js, React, Node.js, and Express.js. I specialize in creating scalable web applications with modern UI/UX. My projects include AI content generation platforms, food delivery systems, and movie streaming apps. I am passionate about clean architecture and problem solving, and I am eager to start my career as an entry-level developer

PROJECT

KeepVault – Secure Digital Document Vault

Developed a full-stack secure document management platform that allows users to safely store, manage, and access their personal data using a zero-knowledge security architecture. The application ensures that sensitive user information is **encrypted** before being stored in the database, prioritizing data privacy and protection.

Built using modern technologies including **Next.js**, **TypeScript**, **Node.js**, and **Express.js**, with **Prisma ORM** for efficient database handling and **PostgreSQL (Neon DB)** as the backend database. The project is containerized using Docker for scalable and consistent deployment.

AI Content Generation Platform (Vidgen AI)

Full-Stack Developer specializing in AI and web applications

- Built AI video, image, and text-to-speech generation platform
- Integrated AI APIs with secure authentication
- Implemented real-time processing and media downloads

Kings Food – Online Food Delivery Platform

Developed a modern and responsive food delivery web application that allows users to browse meals, place orders, and track deliveries in real time. The platform provides an engaging user experience similar to leading food delivery apps, including features like rewards, menu exploration, and seamless ordering flow. Built using modern frontend technologies, the application focuses on user-friendly UI/UX, performance optimization, and responsive design to ensure smooth interaction across devices.

- Backend (Node.js + API)
- Cart + Payment system
- Authentication (Firebase/Clerk — you already use it!)
- Admin dashboard (food management)

MovieStreamingWeb App

Movie Streaming Web Application

- Built movie streaming and download platform using TMDB API
- Added search, categories, trending system

EDUCATION

Self-taught Full Stack Developer with over 2 years of hands-on learning and practice, building real-world projects to strengthen technical skills. Gained practical experience by independently developing applications using modern technologies like Next.js, React, Node.js, and databases, focusing on secure and scalable systems. Strong ability to learn quickly, solve problems, and turn ideas into fully functional products through continuous self-study and project-based learning.

SKILLS

Frontend Development

- Next.js – SSR, SSG, App Router, performance optimization
- React.js – Hooks, Context API, component architecture
- TypeScript – scalable and type-safe applications
- Tailwind CSS – responsive and modern UI design

Backend Development

- Node.js & Express.js – REST API development
- API Design & Architecture – scalable and maintainable APIs
- CRUD Operations & Business Logic Implementation
- Error Handling & Logging Systems

Database & ORM

- MongoDB
- PostgreSQL
- Prisma ORM & Drizzle ORM

Authentication & Security

- Authentication Systems
- Data Encryption & Secure Storage
- Helmet.js (Security headers)
- CORS Handling
- Rate Limiting & API Protection

Deployment

- Docker & Docker Compose
- CI/CD Pipelines (GitHub Actions / GitLab CI)
- Vercel / Cloud Deployment

Advanced Concepts

- REST API Design Principles
- System Design
- Caching
- API Gateway & Microservice Patterns
